

Statement of Verification

BREG EN EPD No.: 218

Issue 1

This is to verify that the
Environmental Product Declaration
provided by:
SAS International

is in accordance with the requirements of:
EN 15804:2012+A1:2013

and

BRE Global Scheme Document SD207

This declaration is for:
SAS System 500 Metal ceiling Baffle with Acoustic Inserts

Company Address

Environmental Product Declaration

EPD Number: 218

General Information

EPD Programme Operator	Applicable Product Category Rules
BRE Global Watford, Herts WD25 9XX United Kingdom	BRE Environmental Profiles 2013 Product Category Rules for Type III environmental product declaration of construction products to EN 15804:2012+A1:2013
Commissioner of LCA study	LCA consultant/Tool
SAS International 31 Sutton Business Park Reading UK RG6 1AZ	BRE LINA Version 2.0.8
Declared/Functional Unit	Applicability/Coverage
1m ² of SAS System 500 metal ceiling baffle with acoustic inserts	Manufacturer specific product average.
EPD Type	Background database
Cradle to Gate with options	ecoinvent v3.2

Demonstration of Verification

CEN standard EN 15804 serves as the core PCR ^a

Independent verification of the declaration and data according to EN ISO 14025:2010

Internal External

(Where appropriate ^b)Third party verifier:

[Click here to enter text.](#)

a: Product category rules

b: Optional for business-to-business communication; mandatory for business-to-consumer communication (see EN ISO 14025:2010, 9.4)

Comparability

Environmental product declarations from different programmes may not be comparable if not compliant with EN 15804:2012+A1:2013. Comparability is further dependent on the specific product category rules, system boundaries and allocations, and background data sources. See Clause 5.3 of EN 15804:2012+A1:2013 for further guidance

Construction Product:

Product Description

System 500 consist of powder coated steel baffle with acoustic insert, made from various combinations and thicknesses of acoustic facings, insulation layers bonded together with adhesive. Standard baffle lengths are 1200mm, 1500mm and 1800mm. Baffle depths are between 100 mm and 500mm, However bespoke size are available on request. System 500 can be plain or perforated to meet acoustic and client requirements.

System 500 acoustic baffles offer a visually engaging alternative to suspended acoustic ceiling systems, ideal for exposed soffit areas. Baffles offer exceptional absorption characteristics, effectively controlling reverberation within these highly sound reflective interiors. Available in numerous colours and sizes, the baffles can be suspended at a range of heights for further visual interest.

Technical Information

Property

System components are manufactured and tested in accordance with BS EN 13964:2014.

Essential Characteristics Performance:

Reaction to Fire: (up to) A2-S1-D0 European Reaction to Fire classification system (Euroclasses)

Release of Formaldehyde: CLASS E1

Release of Asbestos: NO CONTENT

Sound Absorption: (up to) Single Value $\alpha_w = 1.00$ class A

Durability: CLASS B

Main Product Contents

The raw material quantities have been taken for all variations of the system and modelled as a single dataset. The main product contents listed below represent the average values derived from this dataset, with a weight of 7.078Kg/ m²

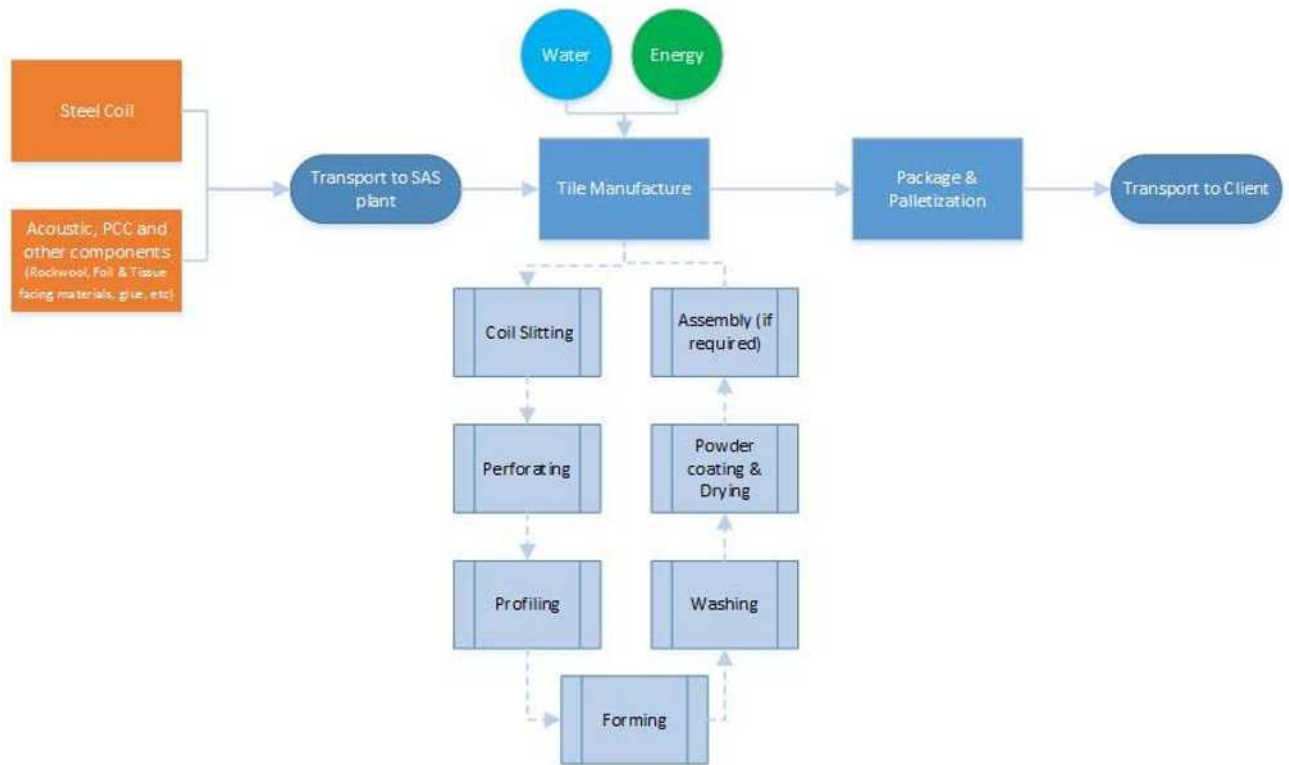

Material/Chemical Input	%
Steel	93%
Polyester Powder Coating	3%
Acoustic insulation core	2%
Tissue facing	1.5%
Adhesive	0.5%

Manufacturing Process

The Bridgend factory is split into two separate units; Unit 1 is where the tile systems are formed, including the addition of the various types of acoustic padding. Key Unit 1 processes include: slitting of the steel/aluminium coils, perforating, washing, spray coating and drying. These processes account for the most energy intensive stages of the products life cycle. Unit 2 is where the grid systems are rolled and formed; it houses less energy-intensive processes than Unit 1.

Process flow diagram

SAS Ceiling Steel Tile Manufacturing Process

Life Cycle Assessment Calculation Rules

Declared / Functional unit description

1m2 of SAS 500 System (7.078Kg/ m²) - Polyester powder coated steel Baffle with Acoustic infills for use in ceiling applications. The product represented in this EPD is based on manufacturing data for all types of steel SAS 500 Baffles with acoustic inserts systems made.

System boundary

This is a cradle-to-gate with options LCA, reporting all production life cycle stages of modules A1 to A3, and end of life disposal module C4 in accordance with EN15804:2012+A1:2013.

Data sources, quality and allocation

The supporting LCA study was carried out using BRE LINA v2.0.8 using manufacturer specific data provided by SAS International for the production period of the 12 months of 2017. Raw material quantities have been taken from recorded production/manufacture data and product geometry from the Syteline internal production system, for all variations of the system 500 steel tile and acoustic insert made in the 12 month period.

SAS International manufacture other products in addition to the System 500 so some allocation of primary data has been carried out. Since the manufacturing steps responsible for slitting, perforating and drying the coated metal are the most energy intensive processes of the site, it is assumed that the gas and electricity consumption is the same for every m² of metal product produced. This same allocation was applied to total site water usage. Production waste has been allocated to individual products by applying a percentage wastage rate (based on historical values and used for stock management) to each quantity of raw material. All packaging and non-production waste (waste packaging) has also been allocated using this methodology with applied percentage based on planned/estimated packaging and waste requirements for each product/system/components.

Secondary data has been drawn from the BRE LINA database v2.0.29 and the background LCI datasets are based on ecoinvent v3.2 upstream extraction and/or processing of inputs are included within the use of the background datasets within LINA. Emissions from fuels used are included within the relevant datasets.

Cut-off criteria

No inputs or outputs have been excluded and all raw materials, packaging and transport, energy, water use and wastes, are included, except for direct emissions to air, water and soil, which are not measured.

LCA Results

Results per declared unit 1m² (7.078Kg/ m²) of this SAS System 500 baffle with acoustic insert for the declared modules can be found in the following.

(MND = module not declared; MNR = module not relevant; INA = indicator not assessed; AGG = aggregated)

Parameters describing environmental impacts			GWP	ODP	AP	EP	POCP	ADPE	ADPF

CRU = Components for reuse;
MFR = Materials for recycling

MER = Materials for energy recovery;
EE = Exported Energy

Scenarios and additional technical information

Scenarios and additional technical information			
Scenario	Parameter	Units	Results
C4 disposal at end of life	It is assumed that as the main element of the 500 system is steel and a valuable material, 100% of the product is recycled at end of life. Acoustic inserts can be disassembled back to core components/layers and then recycled. Aluminium foil facing as valuable material and is 100% recyclable via general recycling streams. 100% of the mineral wool insulation core can be recycled via to manufacturer. It is assumed that the adhesive bond will mainly remain on the face of the acoustic insulation when the layers are separated and will be disposed of as part of the insulation recycling process. Tissue facing material is 100% recyclable, however significant volume is required to make it commercially viable. Therefore it is assumed that it would be sent to landfill at the end of life
